## **Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) N.M. Swerdlow, O. Neugebauer**

When I first laid out the framework for A History of Ancient Mathematical Astronomy, I intended to carry the discussion down to the last applications of Greek astronomical methodology, i. e. Copernicus, Brahe, and Kepler. But as the work proceeded, it became evident that this plan was much too ambitious, and so I decided to terminate my History with late antiquity, well before Islam. Nevertheless, I did not discard the running commentary that I had prepared when studying De revolutionibus in its relation to the methodology of the Almagest. Only recently, E. S. Kennedy and his collaborators had opened access to the "Maragha School" (mainly Ibn ash-Shalir), revealing close parallels to Copernicus's procedures. Accordingly, it seemed useful to make available a modern analysis of De revolutionibus, and thus in 1975 I prepared for publication "Notes on Copernicus." In the meantime, however, Noel Swerdlow, also starting from Greek astronomy, not only extended his work into a deep analysis of De revolutionibus, but also systematically investigated its sources and predecessors (Peurbach, Regiomontanus, etc.). I was aware of these studies through his publications as well as from numerous conversations on the subject at The Institute for Advanced Study and at Brown University. It became clear to me that my own investigations lay at too superficial a level, and I therefore withdrew my manuscript and suggested to Swerdlow that he undertake a thoroughgoing revision and amplification of my "Notes." His acceptance of my proposal initiated the present publication.

**From reader reviews:**

**Doris Simmons:**

Book is to be different for each grade. Book for children until finally adult are different content. To be sure that book is very important normally. The book Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) ended up being making you to know about other knowledge and of course you can take more information. It is very advantages for you. The e-book Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) is not only giving you considerably more new information but also to become your friend when you feel bored. You can spend your own personal spend time to read your publication. Try to make relationship using the book Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10). You never truly feel lose out for everything should you read some books.

**Claire Underwood:**

The publication with title Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) contains a lot of information that you can understand it. You can get a lot of help after read this book. This kind of book exist new information the information that exist in this book represented the condition of the world right now. That is important to you to know how the improvement of the world. That book will bring you throughout new era of the glowbal growth. You can read the e-book on your own smart phone, so you can read that anywhere you want.

**Joseph Barnett:**

The book untitled Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) contain a lot of information on this. The writer explains her idea with easy means. The language is very easy to understand all the people, so do certainly not worry, you can easy to read that. The book was compiled by famous author. The author provides you in the new age of literary works. It is easy to read this book because you can keep reading your smart phone, or program, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can available their official web-site as well as order it. Have a nice go through.

**Jessie Adams:**

In this time globalization it is important to someone to obtain information. The information will make someone to understand the condition of the world. The condition of the world makes the information easier to share. You can find a lot of sources to get information example: internet, paper, book, and soon. You will observe that now, a lot of publisher that print many kinds of book. The actual book that recommended for

you is Mathematical Astronomy in Copernicus's De Revolutionibus, 2 Volume Set (Studies in the History of Mathematics and the Physical Sciences, No. 10) this publication consist a lot of the information with the condition of this world now. This kind of book was represented how do the world has grown up. The dialect styles that writer use to explain it is easy to understand. The writer made some research when he makes this book. This is why this book suitable all of you.
