Biological Effects of Fibrous and Particulate Substances (Current Topics in Environmental Health and Preventive Medicine)

Biological Effects of Fibrous and Particulate Substances (Current Topics in Environmental Health and Preventive Medicine)

This volume examines our current understanding of the biological effects of fibrous and particulate substances, including discussions on nanoparticles. It offers comprehensive information on the latest insights into the immunological effects of various irritants on the human body. Readers will benefit from the contributing authors' diverse perspectives and extensive discussions of key issues, which include molecular alterations of the immune system and autoimmune diseases in connection with asbestos and silica, among others. The chapters also discuss recommendations, practical methods, and nanosafety science in situations involving exposure to nanotoxic substances.

Edited in collaboration with the Japanese Society for Hygiene, this book provides up-to-date information on the immunological effects of nanotoxic substances to researchers interested in environmental and occupational health. Presenting a number of recent concepts and findings in the field, it enables readers to gain a comprehensive knowledge of health problems caused by environmental fibrous and particulate substances.
