Geodesic Flows (Progress in Mathematics) Gabriel Paternain

The aim of this book is to present the fundamental concepts and properties of the geodesic flow of a closed Riemannian manifold. The topics covered are close to my research interests. An important goal here is to describe properties of the geodesic flow which do not require curvature assumptions. A typical example of such a property and a central result in this work is Mane's formula that relates the topological entropy of the geodesic flow with the exponential growth rate of the average numbers of geodesic arcs between two points in the manifold. The material here can be reasonably covered in a one-semester course. I have in mind an audience with prior exposure to the fundamentals of Riemannian geometry and dynamical systems. I am very grateful for the assistance and criticism of several people in preparing the text. In particular, I wish to thank Leonardo Macarini and Nelson Moller who helped me with the writing of the first two chapters and the figures. Gonzalo Tomaria caught several errors and contributed with helpful suggestions. Pablo Spallanzani wrote solutions to several of the exercises. I have used his solutions to write many of the hints and answers. I also wish to thank the referee for a very careful reading of the manuscript and for a large number of comments with corrections and suggestions for improvement.

From reader reviews:

Corey Ison:

This Geodesic Flows (Progress in Mathematics) usually are reliable for you who want to be a successful person, why. The main reason of this Geodesic Flows (Progress in Mathematics) can be one of the great books you must have is definitely giving you more than just simple looking at food but feed you with information that might be will shock your previous knowledge. This book is definitely handy, you can bring it almost everywhere and whenever your conditions at e-book and printed versions. Beside that this Geodesic Flows (Progress in Mathematics) forcing you to have an enormous of experience including rich vocabulary, giving you test of critical thinking that we realize it useful in your day activity. So , let's have it and luxuriate in reading.

Janelle Smith:

Reading can called brain hangout, why? Because while you are reading a book mainly book entitled Geodesic Flows (Progress in Mathematics) your mind will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely will become your mind friends. Imaging each and every word written in a reserve then become one application form conclusion and explanation that will maybe you never get before. The Geodesic Flows (Progress in Mathematics) giving you one more experience more than blown away your mind but also giving you useful info for your better life in this particular era. So now let us explain to you the relaxing pattern here is your body and mind will probably be pleased when you are finished reading it, like winning a. Do you want to try this extraordinary spending spare time activity?

Ryan Donahue:

Do you have something that you enjoy such as book? The publication lovers usually prefer to choose book like comic, quick story and the biggest the first is novel. Now, why not striving Geodesic Flows (Progress in Mathematics) that give your entertainment preference will be satisfied by simply reading this book. Reading routine all over the world can be said as the method for people to know world better then how they react to the world. It can't be explained constantly that reading addiction only for the geeky particular person but for all of you who wants to be success person. So , for all of you who want to start studying as your good habit, you may pick Geodesic Flows (Progress in Mathematics) become your own starter.

James Henderson:

This Geodesic Flows (Progress in Mathematics) is brand-new way for you who has fascination to look for some information as it relief your hunger of information. Getting deeper you upon it getting knowledge more you know or you who still having small amount of digest in reading this Geodesic Flows (Progress in Mathematics) can be the light food for you because the information inside this book is easy to get through anyone. These books develop itself in the form that is reachable by anyone, yes I mean in the e-book form. People who think that in guide form make them feel sleepy even dizzy this e-book is the answer.
